

Pulsar IPL
the visible difference

Date: 29 November 2005

**Professional Preparation for your Big Day
Pulsar IPL – Photo Rejuvenation Treatments**

Pulsar IPL's non-invasive Photo Rejuvenation treatment will make sure that you leave little to chance with your skin on your wedding day. The ideal beauty solution will leave your skin feeling and looking younger, fresher and smoother way beyond your honeymoon period.

Just one course of Pulsar IPL's (Intense Pulsed Light), Photo Rejuvenation treatment has been clinically proven to reduce signs of ageing by up to 10 years. The chance to look two year's younger with one 30 minute facial photo rejuvenation session is already a popular remedy amongst celebrities with little time yet needing fast and long-lasting results without surgery.

Your skin, particularly the face has a habit of reflecting stressful periods or major events so Pulsar safely works to begin the skin's natural renewal process by regenerating healthy cells including collagen and elastin to create that youthful look.

The treatment is virtually pain-free with no down-time or after effects. Immediately after treatment the skin is smoother for applying make-up and also ensures creams and moisturising products work to their maximum effect.

At £80 per session, three or four half-hour sessions are typically needed to achieve maximum effect so the bride or the mother-of-the-bride will show no sign of pre-wedding stress.
