### **Pulsar IPL brings sunshine to your cheeks this Season**

An ideal professional rejuvenation treatment will beat off the skin's most vulnerable time of the year, which falls immediately after the Xmas and New Year. The build up, the parties, the food and alcohol all lead to making the skin more susceptible to lining and wrinkling. Combined with the colder climate, the skin has more than enough to contend with.

Pulsar IPL, a non-invasive professional machine can assist the skin's natural defences through its Intense Pulse Light treatment known as photo rejuvenation. Photo rejuvenation uses safe bursts of light which are then absorbed by the red blood cells. This then damages the wall of the blood vessels allowing the body's own natural defence to remove this tissue. Not only does this method boost the production of collagen and elastin to create youthful looking skin but it can also reverse signs of stress and ageing in only a few sessions.

One of the most effective and time efficient ways to prepare skin for the impending Xmas party is to rejuvenate with Pulsar IPL. At £60 per session three or four half an hour courses can take up to 10 year's off your face. For more information or for your nearest salon please contact Pulsar IPL on 0114 235 6585.

**-Ends-**
